

BUT WHY SHOULD I UPGRADE?

I LIKE MY OLD SCANNER.

I CAN'T AFFORD A NEW ONE.

IS A NEW ONE REALLY THAT MUCH DIFFERENT?

Technology

- New scanners are fully supported by the latest version of your **Microsoft Windows** OS environment.
- LED illumination allows for greater color stability compared to lamps in older technology, plus they never need to be replaced!
- You'll maintain full-rated speed – even with valuable features like auto orientation, auto crop, and skew detection enabled.
- You can still get all the advantages of Kodak Alaris' Perfect Page image processing, providing exceptional scans and images time after time and reducing the need for rescans and post-image processing.
- Get new Perfect Page features like streak filtering for correcting conditions you can't control, like dust — plus auto orientation, image edge fill, hole fill, sharpening, auto brightness/whiteness, and image merge.

- For environments utilizing VRS or image controls connectivity, now you have more options than ever.
- KAMS (**Kodak** Asset Management Software) allows you to monitor the health of your fleet of scanners for better productivity.
- Enjoy new features with new technology like five ultrasonic multi-feed detection zones, four feeder settings, Dynamic Flow Technology, controlled stacking, and more!

Cost Savings

- Compare your existing service contract cost to that of newer technology. In one example, we have seen a 42% savings!
- Take it a step further by purchasing a multi-year extended warranty. In some instances, we have seen a 50% savings from old to new contract pricing— that is besides the protection from annual price increases and built-in discounts

Your old scanner is worth money!

- Make the most of that old scanner by trading it in. Every dollar gets you closer to new technology and greater productivity.

The Payback is Fast!

Service savings and trade-in value pays for your new scanner in no time!
